

## ELEC-TROL KEYBOARDS

With our  
Snap-Lock  
Datakeys provide  
keyboard flexibility

from simple  
arrays to  
totally integrated  
keyboards

Individually available Snap-Lock DATAKEYS incorporate a hermetically sealed reed switch contact with proven reliability, operated by a moving permanent magnet. Normally open, normally closed or transfer contact arrangements available. Designed with a "Snap-Lock Insertion" feature, DATAKEYS require no hardware for mounting on a rigid metal chassis panel that will support the switch under pressures exerted during operation. The DATAKEYS are rated from low level to 10 watt loads for 20 million operations. Up to three diodes can be incorporated within DATAKEYS for steering, compatibility with MOS logic circuits or any type of diode encoding.

### KEYBOARD OPTIONS

STROBE DELAY  
REPEAT FUNCTION  
ROLL-OVER BLANKING  
ERROR SIGNAL  
ODD OR EVEN PARITY  
POSITIVE OR NEGATIVE LOGIC  
MULTIPLE SHIFT  
KEY LAYOUT FLEXIBILITY  
ANY CODING
