MECHANICAL ENTERPRISES' T-5 KEY SWITCH LINE MAKES KEYBOARD OR KEYPAD ASSEMBLY EASY FOR THE OEM. THAT MEANS YOU CAN INCREASE THE PROPRIETARY CONTENT OF YOUR PRODUCT WHILE YOU INCREASE YOUR CONTRIBUTED VALUE...AND YOUR PROFITS.

The T-5 makes keyboard assembly easy because the line is complete. One vendor, one basic switch mechanism provides 3/4" or 3/8" spacing...lighted or regular top...sealed or open contacts...flat or stepped keytop...a complete range of double shot keytops...and the switching actions you need. So inventory control is a snap. One switch design works everywhere.

The T-5 makes assembly easy because it adapts to most keyboard mounting environments. And its PC board mounting configuration eliminates the need for a frame.

Once your T-5 based keyboard is assembled, we still make it easy. The T-5's low bounce crossbar contacts have been tested to 20 million operations. And its unique switching action is virtually insensitive to operator differences. So you know your product's keyboard will stay trouble free.

Let Mechanical Enterprises Incorporated help you configure a more competitive keyboard based product while you increase profits. Call us at (703) 435-9496.
