

John Donohue's "blue line" turns out keyboard switches faster than you can say Oak.

John Donohue, Director of Manufacturing here at Oak, is mighty proud of his "blue line." He ought to be. It's the most sophisticated fully-automated keyboard switch assembly facility in the industry. It was designed with the customer in mind. We wanted to make sure we'd be able to meet his demands for huge quantities of our popular keyboard switches.

And popular they are. We build keyboard switches for everything from miniature calculators to data entry systems to point-of-sale terminals. You can buy them individually or in completely assembled custom keyboards.

If you need low-profile keyboard switches—we have 'em. Our Series 415 switches have a profile of less than $\frac{1}{2}$ inch. And they're available in either single or double "human engineered" keycaps that dress up any product design.

Series 400 and 475 keyboard switches are built with self-cleaning gold cross-bar wiping contacts. You're assured of trouble-free operation through millions of cycles. And our variety of contact arrangements gives you true design versatility.

We also offer a full selection of lighted and unlighted pushbutton switches plus almost any other type of switch you can put your finger on. Let us know your needs.

Write Lou Roels at Oak for product literature, helpful keyboard design tips and free samples of our keyboard switches.

Or if you prefer, dial 800-645-9200 (toll free) for the name of our local representative (In New York, dial collect 516-294-0990).
