

MOS keyboards NOW!

Start your own protest about keyboard vendor promises. Clare-Pendar *delivers* MOS Keyboards, not just promises. Production quantity MOS Keyboards NOW, not next year.

MOS Keyboards in stock, too: Teletype Model 37 format, or Model 33/35 format. Or we'll build to your layout—keypunch, CRT display, interactive, portable—you name it.

Choose from the industry's broadest selection of keyboard ROMs. And if we don't have the code you need, a simple mask change can produce any code

you want—bit or non-bit compatible, up to 9 bits/word.

Reliability? Consider this: A fully encoded trimode ASCII Keyboard with 3 major components—an LSI/MOS circuit, reed keyboard switches, and a printed circuit board. How can a keyboard be more simple? And how can a keyboard be more reliable?

You can learn more about super smooth space bars, lighted keytops, 12 and 16 station small keyboards from your nearby Clare Sales Engineer. Call him for a demonstration or call us in

Post Falls for MOS Keyboard action. Clare-Pendar Co., Post Falls, Idaho 83854. Phone 208-773-4541
