CHEAP AIN'T CHEAP.

Price is a lousy way to buy keyboards. Because the low-price buy can turn into a costly nightmare. You've got to look for reliability...On the job...100% testing at every step. And you need a keyboard with the **right** features for your product: Standard ROM that lets you use any code for any key. 28 un-assigned keys for even more built-in flexibility. N-key rollover for error-free high throughput.

When you find a keyboard like this, you've found a real bargain, a custom keyboard off-the-shelf. The Datanetics 75 Key, Model 70/75. Then start talking price.*

*From \$88 each in quantities of 1,000, or 1 for \$120.

Datanetics
Affordable reliability.
