

Fujitsu Keyswitches

Keyswitches

FES-8 Series

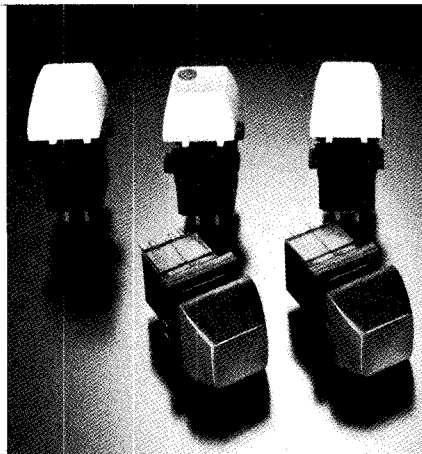

Developed for use in keyboards. Available in wide range, including snap-action and non-snap action key switches, incandescent lamp or LED indication, reed capsule type or solid-state type, and momentary or alternate action. Life guaranteed 10×10^6 operations for both non-snap type and snap type. Stands 47.6 mm (1.87 inches) high on PC board, including keytop.

Low Profile Keyswitches

FES-9 Series

Virtually same keyswitch as FES-8 Series except for lower height. Stands only 35.3 mm (1.29 inches) high on PC board, including keytop.

Snap-Action Keyboard

Designed to enable smooth conversation between operations and systems. Sculptured keyface and snap action provide operators with smooth, fatigue-free operation, significantly reducing keying errors. Standard USASCII code. Key top is double shot or engraved. 19.05 mm (.750 inch) key spacing. Ideal for use in wide variety of applications such as computer terminals, typewriters, microcomputers, etc. Available in extensive range of options, including illuminated keytops, LED built-in keytops, ten-key or control code keys and non-snap switch keyboards.
