

Fujitsu brings you the light touch in keyboards

Are you a design engineer, production engineer, or other involved in the section and purchase of components that go into the terminal equipment your company manufactures? Did you know that there is another type of keyboard on the market that offers a different type of key touch — a touch that can lead to productivity gains for your customers? Well, if you are, and if you didn't, then take a look at these new keyboards from Fujitsu and see what you (and your customers) have been missing. Fujitsu has a full line of keyboards available for terminal equipment, all

featuring the use of the Fujitsu FES-series snap-action key assembly. This highly reliable key assembly is a Fujitsu-engineered snap-action device that makes our keyboards easier to operate because it makes each key lighter to stroke, and with excellent tactile qualities. Thus, with smoother and lighter key touch, operators are less fatigued and, therefore, less prone to error. Fujitsu keyboards offer other advantages, too. Take the large capacity encoder fitted on each board — it's a MOS LSI ROM that helps to keep equipment size down and performance up. And there is a full selection of keyface styles (including

sloped, stepped and sculptured) in arrangements to meet your every need. N-key rollover, 2-key lockout, a wide range of codes (USASCII, EBCDIC, etc.), and even a range of options including illuminated keytops and capped keytops, all increase the choice for you. Remember, the touch can make the difference, so when you need the different touch come to Fujitsu. All at prices you're sure to appreciate.
