

FLOATS LIKE A BUTTERFLY™

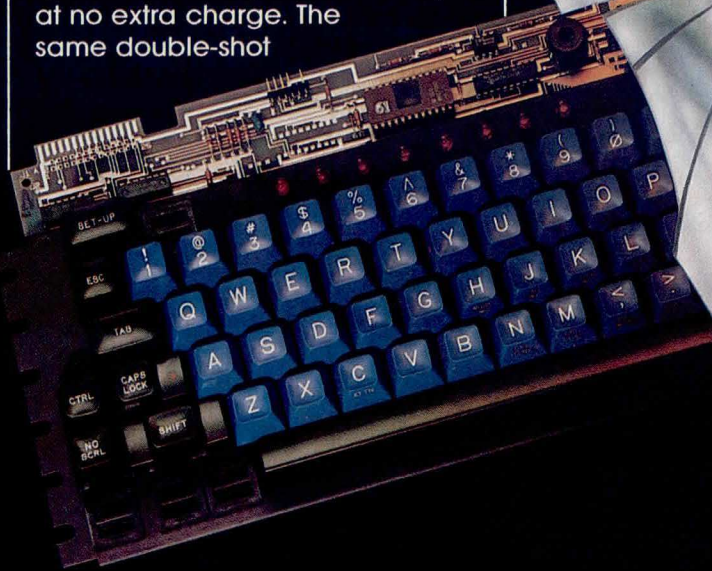

Introducing the Butterfly™ switch. The first key Tronic capacitive keyboard with linear feel.

For years our customers have been successfully using tactile feel, however, we've had input from the field that a lot of you like linear feel. Key Tronic now offers both. We want to be your keyboard supplier.

This patented solid-state keyboard uses the same electronics as our proven tactile design. You still get N-key rollover (a must in any medium to high speed data-entry environment) at no extra charge. The same double-shot

molded keytops with over 20,000 legends and over 300 shapes are still available from the leader.

Please call or write for further information. You'll be glad you did.
